- Microfibre cloth ensures no contaminants remain
- Replaceable cartridges/reels for extended use

© 2026 Hexatronic Group

- Simple one-click design for effective cleaning
- Wide range of consumables available for cleaning and termination

Application

These products are used across a variety of applications, including network maintenance and IBYC procedures, supporting both telecommunications networks and data centre or enterprise network upkeep. They align with best practices for adds, moves, and changes, and are essential for fibre network troubleshooting. Additional uses include index matching for bare fibre adapters and high-end connectors, applying retaining compounds for fibre termination, and utilising alcohol, dispensers, and wipes for thorough fibre preparation and cleaning.

Design

Fibre optic cleaning is one of the most basic, important and often overlooked procedures for maintaining fibre optic networks. FOS offers a comprehensive selection of Fibre optic cleaning & consumables for your factory or on-site termination and maintenance needs. FOS supplies a complete range of one-click cleaners, cartridge cleaners, cleaning sticks, lint free wipes and other cleaning products.

FOS fibre optic cleaning products can be relied on to help ensure optimal network performance is maintained. FOS also supplies a range of bundled cleaning kits, please refer to our Tool, Termination & Cleaning Kits datasheet.
