

Fibre Preparation and Termination Tooling

Fibre Optic Cable Preparation Tooling, Fibre Preparation Tooling, Extraction Tooling, Fibre Termination Tooling

Features

- Range of cable jacket removers to suit most cable types
- Large range of fibre stripping tools in single and multi-hole variants
- Specifically designed precision fibre tooling
- High-quality tooling for efficient cable preparation
- Rugged and long-lasting construction

Application

These tools are designed for both factory and on-site fibre termination, covering a wide range of tasks including crimping connector bodies, scribing fibre stubs, lapping and polishing ferrules, curing connector epoxy, and removing buffer for splicing. They include a variety of fibre stripping tools in single and multi-hole variants, precision-engineered for accuracy, as well as cable jacket removers to suit most cable types. All tooling is high quality for efficient cable preparation, with rugged, long-lasting construction to ensure reliability in demanding environments.

Design

FOS offers a comprehensive selection of fibre optic tooling and accessories. The range extends to all types of cable strippers, cutters, sheath removal tools and termination tooling. All equipment is rugged and suitable for long life cycle use both on site and in controlled termination environments.

FOS also supplies a range of bundled tool kits, please refer to our Tool, Termination & Cleaning Kits datasheet.
